

# TRAVEL RISK MANAGEMENT

Experts in oil & gas, providing accurate and consistent support for you and your travelling employees

## Protect and support oil & gas industry employees

Global trade has brought many benefits and opportunities for business and people logistics is a vital component of that. Employers have a duty of care - a moral and legal responsibility - for the health, safety and security of their employees. For those with commuters that travel on a rotational basis, as well as business travellers, one of the key challenges is the ability to protect and support those employees whilst they are away.

### Wings' Travel Risk Management - experienced, accurate, consistent

At Wings, our experience lies with clients travelling to high risk destinations, so traveller safety has always been at the core of our business. With wholly-owned and managed global operations in strategic, high risk, oil and gas locations, rather than partnership agreements with local agents, Wings ensures accuracy and consistency of data, service, health and safety.

Working with the right travel management company will help alleviate many of the problems of fulfilling a company's responsibilities. But it's not just about providing travellers with a mobile app, it's about your TMC having the specialist knowledge and expertise of the oil and gas industry, to provide accurate, timely and relevant support.

### Mitigating Risk

Our enhanced range of Travel Risk Management solutions are scalable and flexible to deliver the appropriate service depending on your requirements. We can help you and your travellers to avoid risk as well as supporting their safety in the event of any travel disruption, natural catastrophe, terrorist activity or any other unexpected incident, all from one central and reliable source.

## VIMA™

### Your essential travel companion

Wings' Virtual Itinerary Mobile App (VIMA) allows the user to view, manage and communicate their travel itineraries:

- View itinerary
- Sync to calendars
- Share trips with colleagues and family

### Risk alerts and other updates are sent to the traveller's mobile, including:

- Alerts – Flight status updates on delays, gate changes etc
- Check in – Links to online check in from the app
- Travel alerts – verified alerts relevant to the specific itinerary
- Extras – Weather, Destination Info, Currency Converter

## goSecure™ and goSecure+™

### Flexible and scalable tracking, communication and support

When you need more control, our sophisticated risk and alert portal will locate travellers and send personalised notifications to both travellers and bookers.

With goSecure, Wings' specialist Rotational Logistics team can manage this on your behalf; tracking, communicating and assisting your travellers as required. Alternatively, for companies with an established risk management strategy, goSecure+ provides a fully-customised portal where the travel manager can locate, manage and communicate with their travellers at all times.

### goSecure and goSecure+:

- Quickly identify disrupted travellers
- Monitor travellers to understand the impact across their entire trip
- Send proactive communications to the company contact or individual traveller
- Drill down into the travellers' itinerary detail for greater visibility
- Provide full audit reporting and data export to external systems
- Can be managed by organisation, department or event
- Enable company-specific alert triggers

Furthermore, goSecure provides GPS tracking via the VIMA app – so the traveller can 'check-in' every time their location changes, allowing precise tracking and targeted assistance in an emergency situation.

goSecure is powered by iJet, a world-leader in travel risk management solutions.

## WINGS24®

Underpinning all of our travel risk management solutions is our round-the-clock service; we operate and manage our global emergency centre, staffed by knowledgeable oil and gas specialists trained to handle travel requests any time of the day or night, ensuring a seamless and reliable service around the clock.

### ISO 9001 FOR QUALITY AND PROCESS MANAGEMENT

Wings is independently certified to ISO 9001, it provides our customers with firm reassurance about our commitment to quality and process management.
